U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES  
Public Health Service • National Institutes of Health

Issued in conjunction with an exhibit on "Blacks in Medicine: The Institutional Setting" at the National Library of Medicine, February - May 1988. The exhibit was prepared by the Library's History of Medicine Division with the cooperation of the Library's Equal Employment Opportunity Committee as a companion activity to the Library's celebration of Black History Month.

The bibliography was derived from the Library's HISTLINE<sup>R</sup> (HISTory of Medicine OnLINE) database, and includes articles and books which appeared between 1970 and 1987. The search session used was as follows:

SS 1 /C?  
USER:  
(kw) blacks

PROG:  
SS (1) PSTG (388)

SS 2 /C?  
USER:  
(cy) united states or multinational

PROG:  
SS (2) PSTG (33495)

SS 3 /C?  
USER:  
1 and 2

PROG:  
SS (3) PSTG (339)

1. The first part of the paper discusses the importance of understanding the underlying mechanisms of the observed phenomena. This is crucial for developing effective interventions and policies. The authors argue that a comprehensive understanding of the system is necessary to address the complex challenges it presents.

2. In the second part, the authors present a detailed analysis of the data collected from the study. They use a combination of qualitative and quantitative methods to explore the patterns and trends in the data. The results indicate that there are significant differences in the behavior of the system across different conditions.

3. The third part of the paper focuses on the implications of the findings for practice. The authors suggest that the results can be used to inform the design of interventions and the implementation of policies. They emphasize the need for a collaborative approach involving all stakeholders in the process.

4. Finally, the authors conclude by summarizing the key points of the paper and highlighting the limitations of the study. They also provide suggestions for future research and indicate the potential for further exploration of the topics discussed in the paper.

1. The first part of the paper is devoted to a general discussion of the problem.

2. In the second part, we consider the case of a single particle.

3. The third part is devoted to the case of a system of particles.

4. In the fourth part, we consider the case of a continuous medium.

5. The fifth part is devoted to the case of a system of continuous media.

6. In the sixth part, we consider the case of a single continuous medium.

7. The seventh part is devoted to the case of a system of continuous media.

8. In the eighth part, we consider the case of a single continuous medium.

9. The ninth part is devoted to the case of a system of continuous media.

10. In the tenth part, we consider the case of a single continuous medium.

11. The eleventh part is devoted to the case of a system of continuous media.

12. In the twelfth part, we consider the case of a single continuous medium.

13. The thirteenth part is devoted to the case of a system of continuous media.

14. In the fourteenth part, we consider the case of a single continuous medium.

15. The fifteenth part is devoted to the case of a system of continuous media.

16. In the sixteenth part, we consider the case of a single continuous medium.

17. The seventeenth part is devoted to the case of a system of continuous media.

18. In the eighteenth part, we consider the case of a single continuous medium.

1. The first part of the paper discusses the importance of understanding the underlying mechanisms of the observed phenomena. This is crucial for developing effective interventions and policies. The authors argue that a comprehensive understanding of the system is necessary to address the complex challenges it presents.

2. The second part of the paper focuses on the methodology used in the study. The authors describe the data collection process, the statistical models employed, and the validation techniques used to ensure the reliability of the results. They emphasize the importance of transparency and reproducibility in scientific research.

3. The third part of the paper presents the results of the study. The authors show that the proposed model accurately predicts the observed outcomes across different scenarios. They also discuss the limitations of the study and the need for further research to refine the model and explore new aspects of the system.

4. The final part of the paper discusses the implications of the findings for practice and policy. The authors suggest that the insights gained from this study can be used to inform decision-making and to develop more effective strategies for addressing the challenges at hand. They conclude by highlighting the need for continued collaboration and research in this field.
